

Overview of the SCAN Policies Database

The State Child Abuse and Neglect (SCAN) Policies Database compiles data on the definitions and policies that states use in their surveillance of child maltreatment, along with data on associated risk and protective factors. The SCAN Policies Database is funded by the Office of Planning, Research, and Evaluation in collaboration with the Children's Bureau in the Administration for Children and Families at the U.S. Department of Health and Human Services. The project team is led by Mathematica in partnership with Child Trends.

The project's purpose is to review and compile information from states' definitions and policies, to create a database of those definitions and policies (the SCAN Policies Database) that can be used for analysis. The database is a resource for researchers, analysts, and others who are interested in examining differences between states in their definitions and policies on child maltreatment.

Content

The scope of the SCAN Policies Database includes information about state definitions and policies related to child abuse and neglect for all 50 states, the District of Columbia, and the Commonwealth of Puerto Rico. This information represents data collected, reviewed, and verified between May 2019 and July 2020. The data reflect the state definitions and policies for the calendar year 2019. The scope of topics in the SCAN Policies Database includes states' definitions of child abuse and neglect as well as information about policies related to reporting, screening, and investigating child maltreatment. Key aspects of the child welfare systems' responseand context are also included.

The content in the database is organized into six domains. The state profiles, codebook, data collection protocol, and data file are also organized by these domains. In the protocol, each question is named with a prefix that identifies its associated domain. The six domains are listed below, with the identifying protocol number prefix.

Domain	Question prefix
Definitions	D
Reporting	R
Screening	S
Investigation	I
Child welfare response	W
Child welfare system context	С

State Profile

This SCAN Policies Database state profile serves as a summary of the information collected about the definitions and policies for the identified state. Each profile is organized by topical domains, which contain a set of tables that depict the state's information for each variable within that domain.

This information was gathered through a document collection, review, and coding process conducted by the SCAN Policies Database team. Input from states on data collection was obtained through a confirmation and verification process. More information about the SCAN Policies Database data collection procedures can be found in the data user's guide and data collection protocol which are accessible from the Data Use Resources page https://www.scanpoliciesdatabase.com/data-use-resources.

The state profile presents responses for each variable with "yes," "no," "unknown," or other response as appropriate. The response of "unknown" was used for topics that could not be located from the state's available resources or verified with the state. In some cases, "logical skip" was used when a question was not applicable to a particular state given a related response on a preceding question.

Data use resources

Several data use resources are available to support users of the SCAN Policies Database:

- Data user's guide: The guide has detailed information about the data set, including the
 process used to collect and review the data, the scope of information included in the data
 set, guidance on using the data, such as how to link the data with other data sources; and
 notes about specific topics. This data user's guide also has two appendices. Appendix A
 provides a glossary of key terms. Appendix B summarizes the decisions made on the scope
 and variables to include in the SCAN Policies Database after a data quality assessment.
- Codebook: The codebook provides information about each variable in the data set, including variable names, labels, definitions, protocol number, variable type, and frequencies. The codebook has two appendices. Appendix A contains supplemental notes that are important for accurately interpreting and using the data. Appendix B is a comprehensive list of all state statutes and policy documentation sources used to collect data for the SCAN Policies Database for each state, District of Columbia, and Puerto Rico.
- **Data collection protocol:** The protocol has the questions used to collect information about states' statutes and policies as part of the data review and coding process. Appendix A provides a glossary of key terms.

These data use resources can be found on the SCAN Policies Database website (https://www.scanpoliciesdatabase.com/data-use-resources) or from National Data Archive for Child Abuse and Neglect (NDACAN) (https://www.ndacan.acf.hhs.gov/).

Supplemental Notes on State

Definitions

Giving birth to a substance-exposed infant is not itself considered maltreatment. When newborn infants have a positive toxicology finding, an evaluation is to be conducted to determine whether abuse or neglect have occurred (as defined in Kentucky's Revised Statutes), and an investigation is warranted.

Screening

The state has instituted a statewide central intake process, wherein intake staff housed in each region may receive and assign reports to other regions.

Investigations

Criminal records check and child welfare or central registry check are both done during intake.
