

SCAN Policies Database State Profile 2023: Wyoming

Overview of the SCAN Policies Database

The State Child Abuse and Neglect (SCAN) Policies Database compiles data on the definitions and policies that states use in their surveillance of child maltreatment, along with data on associated risk and protective factors. The SCAN Policies Database is funded by the Office of Planning, Research, and Evaluation in collaboration with the Children's Bureau in the Administration for Children and Families, U.S. Department of Health and Human Services. Mathematica leads this project in partnership with Child Trends.

The project's purpose is to review and compile information from states' definitions and policies to create a database of those definitions and policies that can be used for analysis. The SCAN Policies Database is a resource for researchers, analysts, child welfare agency staff, and others interested in examining differences between states in their definitions and policies on child maltreatment and how they change over time.

Content

The scope of the SCAN Policies Database includes information about state definitions and policies related to child abuse and neglect for all 50 states, the District of Columbia, and the Commonwealth of Puerto Rico. The SCAN Policies Database team gathered this information through a document collection, review, and coding process. The team obtained input from states on data collection through a confirmation and verification process. More information about these data collection procedures can be found in the data user's guide and data collection protocol, accessible at <https://www.scanpoliciesdatabase.com/data-use-resources>.

The SCAN Policies Database 2023 represents data collected, reviewed, and verified between June 2023 and July 2024. The data reflect the state definitions and policies for the calendar year 2023. The scope of topics in the database includes states' definitions of child abuse and neglect, as well as information about policies related to reporting, screening, and investigating child maltreatment. Key aspects of the child welfare systems' response and context are also included.

The content in the SCAN Policies Database is organized into six domains. The state profiles, codebook, data collection protocol, and data file are also organized by these domains. In the protocol, each question begins with a letter prefix identifying the domain for each variable. The six domains with the identifying protocol number prefix are listed below.

Domain	Question prefix
Definitions	D
Reporting	R
Screening	S
Investigation	I
Child welfare response	W
Child welfare system context	C

State profile

This SCAN Policies Database state profile is a summary of the information collected about the definitions and policies for the identified state. Each of the six domains contain a set of tables that depict the state's information for all variables within that domain.

The state profile presents data for each variable with “yes,” “no,” “unknown,” or other response, as appropriate. The response of “unknown” appears for topics that could not be located from the state's available resources or verified with that state. In some cases, “logical skip” appears when a question was not applicable to a particular state, given a related response on a preceding question. Some information was not included in the state profile to ensure alignment with Executive Orders or other Presidential Actions.

Data use resources

Several data use resources are available to support users of the SCAN Policies Database:

- **Data user's guide:** The guide has detailed information about the data set, including the process used to collect and review the data, the scope of information included in the data set, guidance on using the data, such as how to link the data with other data sources, and notes about specific topics. The data user's guide includes appendices, including information about changes to the data between 2021 and 2023 that reflect changes to state laws and policies during that time period. There is one data user's guide that is updated and applicable for all rounds of data collection for the SCAN Policies Database.
- **Codebook:** The codebook provides information about each variable in the data set, including variable names, labels, definitions, protocol number, variable type, and frequencies. There are separate codebooks to summarize the data from each round of data collection.
- **Errata statement:** The errata statement presents corrections applied to previous rounds of data for the SCAN Policies Database. Starting in 2023, there is one errata statement that is updated and applicable for all rounds of data collection for the SCAN Policies Database.
- **Data collection protocol:** The protocol has the questions used to collect information about states' laws and policies as part of the data review and coding process for each round of data collection. There are separate data collection protocols for each round of data collection for the SCAN Policies Database.

These data use resources can be found on the SCAN Policies Database website (<https://www.scanpoliciesdatabase.com/data-use-resources>) or from the National Data Archive for Child Abuse and Neglect (NDACAN) (<https://www.ndacan.acf.hhs.gov/>).
